

"Extranets... are definitely the next big thing."

James Barksdale, Netscape

Extranet

An Extranet is a network application that lets your company use the Internet for secure business relationships with partners, suppliers, and customers.

Extranets deliver competitive advantages by allowing companies to extend internal systems to external business partners. Extranets are the next evolutionary level of Electronic Commerce for corporations and small businesses.

Extranets provide the benefits of EDI (Electronic Data Interchange) and collaboration in a secure, open, and interactive way over the Internet.

Manufacturing companies can extend the benefits of inter-enterprise computing, traditionally served by EDI, to production and design partners. Extranets can let companies coordinate design, manufacturing, scheduling and delivery across the supply chain.

Software and high technology firms can leverage the extranet to provide support to customers and partners, and to access remote workers all over the world.

Financial services and banks can use secure extranet applications to dramatically reduce the cost of proprietary networks for financial transactions. Banks can use Extranets to provide services to business customers over the Internet.

Digital media and publishing companies are looking to extranets to dramatically accelerate the design and production cycles for film, video, multimedia and graphics. New business models and service opportunities are emerging for Extranet-enabled companies.

Intranet

An Intranet is a private computer network based on the communication standards of the Internet. It is smaller version of the Internet that only the members of an organization can see. Companies can create, within their walls, a manageable, secure version of the World Wide Web. These internal Webs are growing from an explosion in the use and understanding of Internet technology.

Benefits of an intranet

It is not only the removal of paper that leads to organizational benefit. What is done with that information in this new Web-enabled environment has a huge impact. Intranets allow an organization to spend less time on things that bring no value such as chasing down the right information to solve a problem.

Productivity increases as corporate knowledge is more accessible and the data is more accurate. Flexibility in time of delivery of knowledge is gained as information is always a click away. Intranets allow for a place where boundaries are lowered and information exchange is encouraged. This leads to more informed employees with the ability to make better, faster decisions. This in turn leads to better productivity and more time for revenue generation.
