

# Enterprise Strength Instant Messaging Solution

Using **Netramedia's enterprise strength Instant Messenger**, you can drastically improve the communication with co-workers and colleagues, be they on another floor, in another town or even another country.

The Enterprise Instant Messenger Server allows companies to create and control their own instant messaging network on their Intranet (LAN) or in on a Virtual Private Network (VPN) environment, where they use public Internet infrastructure to connect branches at local level with the head office, but also with each other.

The beauty of the Enterprise Messenger client software is that it's installed within less than 15 minutes and comprehended in about 5 minutes. If you use it properly, you will see a return on investment (ROI) within less than a week, often within less than a single day! How many software packages can deliver the same? We ask you!

Netramedia would be delighted to host a presentation on the power and effectiveness of an instant messaging network and will provide detailed plans for a solution suitable for your Network.

In addition we can organise a pilot scheme lasting 1 month to allow the system to be tested to show its effectiveness within your organisation.

Enterprise Messenger was developed with dispersed workgroups and their requirements in mind and it works perfectly over the Internet as well as in an Intranet. Enterprise Messenger certainly has all the standard features of the common messengers and **with it you can:**

- >> Chat in real time to colleagues, suppliers, partners and customers
- >> Send files, email addresses and URL  
Leave messages and/or files to people who are off-line
- >> Chat in a multi-user environment
- >> Keep your agenda with a Reminder/To-Do List

- >> In connection with MS NetMeeting you can also use voice, video and whiteboard functions in a peer-to-peer environment, thus further enhancing Enterprise Messenger's own features

## **Plus, you will be able to use these unique features:**

- >> Reply to specific messages and create conversation threads
- >> Retrieve your user list from the server at any time from any place
- >> Send files to off-line users, plus Enterprise Messenger remembers location of all sent/received files
- >> Keep accurate records of your conversations: The unlimited message history is on-screen at all times
- >> Export all logs to HTML or text format
- >> Search messages by date, content, length, type, and 9 more options
- >> Unlimited amount of profiles on the same computer
- >> Create groups within groups for large amounts of users
- >> Create Tracker Rooms where a directory of expertise can be maintained allowing fast location of those with expertise in particular areas
- >> Visibility groups that control who sees your online status
- >> Extensive drag & drop support
- >> All information is sent and stored in a secure and encrypted state
