

## Server Options

### FINDING THE MOST APPROPRIATE HOSTING SOLUTION

#### **Netramedia Vision Hosting**

With Vision Hosting your site is hosted on multiple web servers, ensuring it is at all times ultra-fast and constantly available. The unique Vision Hosting design guarantees your site to be fully operational online even in the event of a server failure. All sites on Vision Hosting have full scripting support for Perl, PHP and CGI. Vision Hosting is based on Microsoft Windows 2003 but does not include support for ASP scripting (see Vision Hosting Windows if you require ASP).

#### **Vision Enterprise Hosting**

Vision Enterprise Level Hosting includes all the benefits described above. In addition, requests to your website are evenly distributed (load balanced) across multiple servers increasing the performance and availability of your site. Enterprise Hosting also includes advanced server specifications across the less populated servers, which ensures optimal performance.

#### **Vision Windows 2003**

Vision Windows 2003 is based on the latest Microsoft 2003 IIS6 servers with full support for ASP, Perl, CGI, PHP, ISAPI and SHTML scripting. Additionally, our Windows servers offer full and unrestricted support for the .NET Framework.

#### **Vision Windows 2003 Enterprise**

Vision Windows 2003 Enterprise includes all the benefits stated for Vision Windows 2003. Furthermore, requests to your website are evenly distributed (load balanced) across multiple servers increasing the performance and availability of your site. Again Vision Windows 2003 Enterprise includes advanced server specifications across less populated servers, ensuring optimal performance.

#### **Vision Redhat**

Vision Redhat is based on the latest Redhat Linux web-servers running Apache web-server. Functionalities include full support for Perl and PHP scripting with Full telnet and SSH access also provided.

#### **Vision Redhat Enterprise**

Vision Redhat Enterprise incorporates all the benefits above with the requests to your website being evenly distributed (load balanced) across multiple servers to increase the performance and availability of your site. As with the Vision Enterprise and Vision Windows 2003 Enterprise packages, Vision Redhat Enterprise also uses advanced server specifications across all the less populated servers to ensure optimal performance.
