

Web Services and Applications

DEVELOPING RICH INTERNET APPLICATIONS

Netramedia and its partners have a huge wealth of experience in the development and deployment of online applications. In addition to traditional client server / web based applications we have invested heavily in the development of Rich Client Interfaces utilising the power of Macromedia's MX framework and Microsoft's .NET framework.

Through Rich Internet Applications value is created for end users by:

- ▣ Reducing frustration through an intuitive, interactive and real-time user experience.
- ▣ Flattening the learning curve for new and novice users.
- ▣ Saving time with a single screen interface.
- ▣ Combining the functionality of traditional client/server applications with the broad reach and low-cost deployment of web applications.
